Computer Maintenance Service and

Computer Consultation Service

ue to the popular use of computer in the modern world, many disabled persons can now owe computers for learning, working and to facilitate their living in various aspects. Through the use of computer, they can maintain close connection with outside world beyond the confines of their disabilities. They can approach a wide range of information through the computer network. However, the popular use of computer bring together many problems both in the application and repair. In view of this, our Association has organized the *Computer Maintenance Service and Computer Consultation Service* which aims to assist disabled persons to tackle the computer problems encountered and to facilitate their use of computer.

Our Association started to provide computer consultation and repair service since last year. The response was encouraging. Besides, in connection with the needs of disabled persons, we have implemented the *Home-Based Computer Maintenance Service* in October this year which aims to cater for those disabled persons who cannot send their computers to our office for repair. The following information briefly introduced these three types of computer services:

1. Computer Consultation Service

Through direct phone contact, our technician and volunteers will provide advice and information on problems concerning computer hardware and general computer problems for disabled persons or rehabilitation agencies.

2. Computer Maintenance Service

To provide computer maintenance service for disabled persons. Maintenance services are provided to computer hardware model 286, 386, 486 as well as peripheral computer installation. The applicant will be responsible for the transportation of the computer to and from our office.

3. Home-Based Computer Maintenance Service

The service mainly caters for those disabled persons who have difficulties in the transportation of the computers. The service scope is the same as Computer Maintenance Service.

Please introduce the above service to your disabled friends if they need the above mentioned service. For any enquiries for our computer services, please feel free to contact us.

Annual General Business Meeting

EMV News

&

Annual Dinner

he 12th Annual General Meeting was held on 20th October 1995 (Friday) at 6:30 pm in the Duke of Windsor Social Service Building. The Annual Dinner was held immediately after the AGM in the Hong Kong Medical Association. The dinner served was in Vegetarian style and there was lucky draw during the dinner.

New Staff

s. Lam Suet Fun had joined our Association in April, 1995 as Placement Officer. She is in charge of our newly established project, the 'Supported Employment Service.' Any enquiries concerning the service are welcomed to make direct contact with Ms. Lam.

Computer Wanted

ur Desktop Publishing Workshop aims to provide training and job opportunities for disabled. It encourages the disabled to become independent with their expertise in desktop publishing work. The workshop is expanding its business and increased number of disabled persons joined the workshop. We now want the donation of some IBM compatible PC with hard disk for the disabled to practise the Chinese data entry and simple editing work.

Members and volunteers please help to pass this message to your colleagues and friends. There is no dead line for this appeal. For enquiries and donation, please call us at 2776 8569.

Volunteer Station

Visit to REC

visit to Jockey Club Rehabilitation Engineering Centre (REC) was organized to our members and volunteers on 15th July 1995 (Sat.). A total of 7 joined the visit. Dr. Daniel Chow, Assistant Professor of REC, had given us a warm reception and detailed introduction of the service carried out by REC. The volunteers showed enthusiasm in the work of the Centre and were inspired by the updated technology applied on the design of rehabilitation aids in the Centre.

New Volunteers

n the past months, some new volunteers join EMV and became our new force in serving the community with their expertise. They include:

Ms. Cheung Yuen Chong Public Relations Manager

Mr. John Chiang Lecturer in Electrical Engineering

Dr. Opie-Smith Dentist
Ms. Wong Oi Ling Nurse

Ms. Yu Wing Hung Medical Student

Mr. Koo Yiu Fai Medical Student
Mr. Tam Kwok Wai Sunny Medical Student

Here, we do not only welcome them, we also hope that they would introudce our service to their friends around, thus enabling more people to know or to join us.

Technology Update

7 ith the growing popularity of 'Internet' among people in Hong Kong, the provision of support to facilitate disabled persons to utilise Internet, E-mail and World Wide Web for continuing education and communication has thus become one of our major focus. Emphasis is put on the modification of input device to facilitate those severely physically handicapped persons to access to computer.

Voice Command System for Personal Computer

This system uses the commercially available products such as Sound Blaster Card and Voice Assist for operating word processing software such as Microsoft Word. With the availability of this system, physically handicapped persons can now use verbal command instead of keyboard or mouse for input in order to operate the computer. Recently, we have helped two disabled persons to utilise this system in making telephone conversation and using Write for Chinese Window.

Computer Assisted Phone

Commercially available phone quest and 80486 computer are used in developing this system. This system when used in conjunction with the verbal command system, an adapted headphone and mouth piece can make the use of verbal command to control operation of telephone come true. This system is specially designed for those quadriplegic persons so that they can rely on the telephone for external communication and work.

Adapted Finger Mouse

At present, many software has to be operated under the Window environment. However, majority of the severely physically handicapped cannot manage a mouse or trackball. This has greatly limited their access and use of computer. In view of this limitation, we have recently adapted a commercially available finger mouse such that the user can control the cursor or drag and drop to choose the commands by just a slight movement of his/her body parts. Hence, these users can utilise those software operated under the Window environment for example, Netscape, Eudora, Newswatch etc..

Programmable Keypad for Personal Computer

This keypad can simplify various types of special switches which are connected to computer keyboard. Through the use of special switches, handicapped children can utilise the computer assisted rehabilitation software.

All of the above mentioned devices are developed through the adaptation of commercial products. This application can help to provide high quality and reliable rehabilitation devices within a short period of time.
